

Dear All,

In preparation for the work of the next congress in Montreal, some suggestions will be asked in order to better guide the construction of the European round table. In particular I would like to know if there are topics that you think should be addressed / deepened in a specific way.

As in the Istanbul edition, I thought to present a photograph of the production in Europe, the market situation (problem of adulteration, consumption bending), the current state of the fight against varroa and the diffusion of wasp *velutina* and *aethina tumida*. The current scenario of the problems related to the use of pesticides in agriculture (glyphosate), despite the suspension of three active principles at Community level. Finally I remind you that this year there will be the election of the President of the European Regional Commission, you will be informed about the deadline for submission of applications. I would also like to know who of you will be present in Montreal to ask for a contribution to the round table bringing the experiences, problems and opportunities of the various countries.

Thank you for your cooperation.

Diego Pagani

Apimondia European Regional Commission President
